

Classify triangles by side length

1

In geometry, what's the name for a triangle where all sides are the same length?

- | | | |
|-------------|-------------|---------------|
| A Edifice | B Ebullient | C Equilateral |
| D Elongated | E Erstwhile | F Epaulet |

2

isosceles

- A Two sides are the same length and one is different
- B All sides are a different length
- C All sides are the same length

3

All sides are a different length

- | | |
|-------------|---------------|
| A scalene | B equilateral |
| C isosceles | |

4

Name the type of triangle based on its sides: Equilateral = 3 identical sides, Isosceles = 2 identical sides, Scalene = all different sides.

- | | | |
|-----------|-------------|---------------|
| A scalene | B isosceles | C equilateral |
|-----------|-------------|---------------|

5

Choose the right description of the triangle based on its sides

- | | | |
|---------------------------------|--|------------------------------------|
| A All sides are the same length | B Two sides are the same length and one is different | C All sides are a different length |
|---------------------------------|--|------------------------------------|

6

scalene

7

Name the type of triangle based on its sides: Equilateral = 3 identical sides, Isosceles = 2 identical sides, Scalene = all different sides.

- | | | |
|-------------|-----------|---------------|
| A isosceles | B scalene | C equilateral |
|-------------|-----------|---------------|

8

Choose the right description of the triangle based on its sides

- | | | |
|------------------------------------|---------------------------------|--|
| A All sides are a different length | B All sides are the same length | C Two sides are the same length and one is different |
|------------------------------------|---------------------------------|--|
